

# Evaluating assumptions about Maximo and ArcGIS Integration

Andy Stewart  
ActiveG - Managing Partner

May 30, 2024

# Checking our assumptions about Maximo and GIS. Are these true?

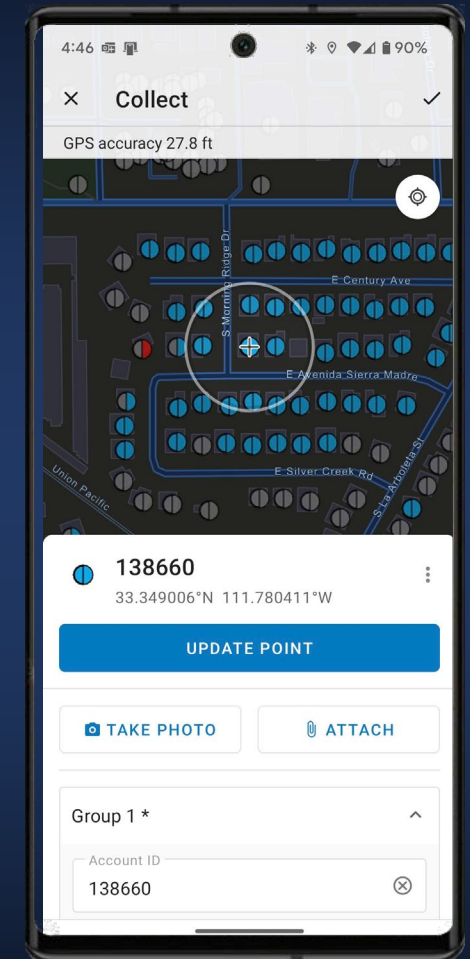

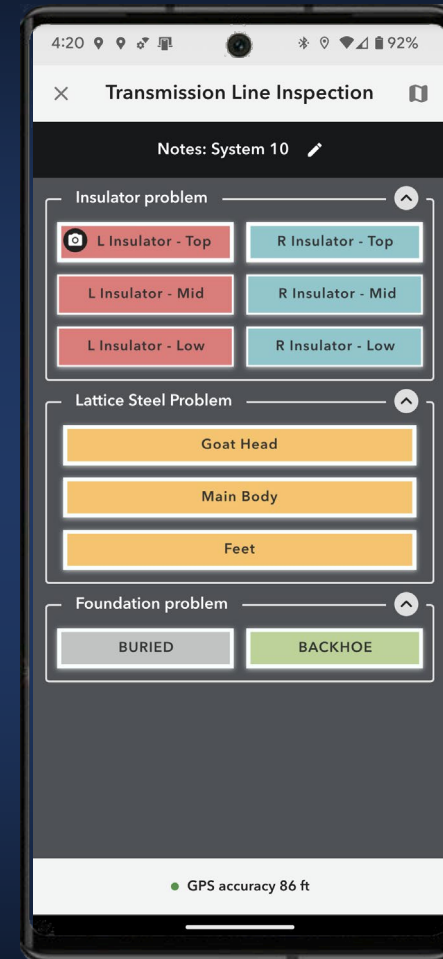

1. A map embedded in Maximo is the best way to view spatial asset and work data.
2. I need to synchronize all my data between ArcGIS and Maximo.
3. My users can't deal with multiple apps for different business processes.

# Esri Field Apps

Esri Field Apps help you to:

- Create and configure maps to fit your organization's Maximo and GIS workflows.
- Collect and update information in the field and log your current location.
- Use the apps online or offline—regardless of your network availability.

# Reasons companies choose ArcGIS/Maximo Integration

**Leak Report**

**Break Location?\***

Service Line  Main Line

**Is Field Services needed for a repair?\***

Yes  No

**Water Loss? (Gallons)**

123

**Cause of Leak?**

BOLTED COUPLING/JOINT

- Easy to configure and deploy
  - No coding required
- Spatial visualization baked into the entire process
- Easy to tailor the process to client needs
- Robust reporting
- Closed loop
  - Report → Validate → Repair → Report
- Simple, effective user interface

# Esri APIs make a variety of maps accessible to Maximo users
