### IBM Maximo 7.6.1 vs. Maximo Application Suite (MAS) A Comparative Analysis

Michael Guns, CRL, CEFP, CMRP JFC & Associates

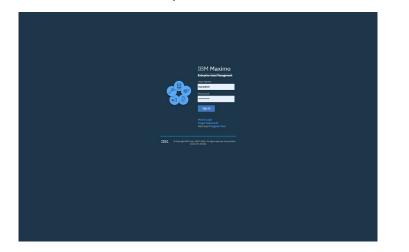

### Agenda

- ► Key Differences
- Start Centers Operational Dashboards
- User Interface Basic Navigation
- ► User Management
- Reliability Strategies
- ►Wrap Up

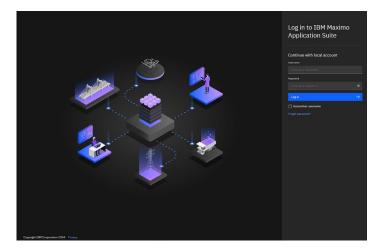

IBM Maximo 7.6.1 Traditional on-premise or MaaS EAM system.

Maximo Application Suite (MAS) Al-driven, cloud-native platform using Red Hat OpenShift.

- Modern UI with intelligent work centers.
- AI/ML-driven insights for scheduling and asset management.
- OpenShift-powered containerized user access.

# Start Centers – Operational Dashboards

#### Maximo 7.6.1:

Traditional Start Center Portlets (KPIs, Result Sets, Quick Insert).

Customizable, but UI is dated and less intuitive.

Requires manual refresh for updates.

#### MAS:

Modern tile-based interface with role-based dashboards.

✓ Dynamic and interactive KPIs with real-time updates.

Improved mobile and web responsiveness.

**Key Change:** Easier visualization of tasks and insights, reducing clicks to access critical

**Purpose:** The most immediately noticeable change: the user experience.

The UI is the front door to the system, and this is where users will feel the most direct impact. Highlighting these changes reduces anxiety and helps prepare users for what to expect.

Maximo Manage features a modern, responsive interfaceStreamlined navigation bar and search

•Tiles/dashboard views for quicker access to frequent tasks

•Examples:

- Work Order Tracking screen—fewer clicks, collapsible menus
- New "Cards" layout in list views
- $\circ~$  Global search vs 7.6's application-specific searches

## Navigation Changes:

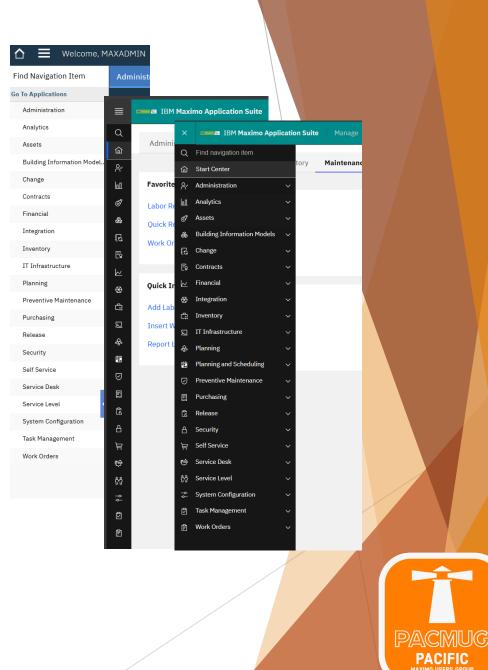

#### Maximo 7.6.1:

- Left-hand navigation menu and list tab structure.
- ✓ **Static menus**; users must click through multiple levels.

### MAS:

- ✓ Intelligent Work Centers → Role-based access (Planner, Technician, Supervisor).
- Global search with AI recommendations.
- ✓ Improved UX: Fewer clicks, quicker navigation, and enhanced filtering.

### User Management

### Maximo 7.6.1:

✓ User provisioning through Security Groups and People records.

Static authentication model (LDAP, SSO options).

### MAS (OpenShift IAM):

Red Hat OpenShift-powered Identity & Access Management (IAM).

- Centralized SSO authentication across Maximo modules.
- Scalable user creation with containerized environments.

**Key Benefit:** Easier user provisioning, improved security, and faster onboarding.

### User Management

#### Maximo 7.6.1:

User provisioning through Security Groups, Users and People records. Static authentication model (Native, LDAP, SSO options).

# **Reliability Strategies**

#### Maximo 7.6.1:

Traditional asset hierarchy (parent-child structure).

✓ Failure code hierarch

 Limited visualization of asset performance.

#### MAS:

Asset Performance Management (APM) integration.

✓ 3D asset visualization & Digital Twin compatibility.

IoT & AI-powered predictive maintenance to reduce downtime.

**Key Change:** Asset insights are **real-time** rather than **reactive**.

## **Reliability Strategies**

### AI Driven Reliability and Failure Identification

Asset		
	Asset type	Asset configuration
Pump	× Centrifugal	× Jmp - Horizontal - Multistage - Barrel Type - Mechanical Seal - Radial-Sleeve Bearings-Oil Lubed × Get strategy →
Overview Failure modes	Mitigation activities	
Operating context (j)		Oil Analysis
Preview activities in all contexts		Preventative maintenance (PM) details
Criticality Duty cycle Critical  High Minor  Low	Service condition	This task has the objective of ensuring equipment reliability and operability by maintaining high quality lubrication, detect wear in rotating components, and ensure that the oil remains clean and free of contamination. For CHM conditions the task, by itself, mainly addresses detecting degraded oil either from normal use, wear of other components, in-leakage of water from leaks in lube oil cooling heat exchangers or internal bearing coolers, or worn labyrinth seals. In a full PM program for CHM conditions, the failure is only marginally sensitive to the task interval.
Activities	Frequency	Frequency Labor hours 2Y 2
Acoustic Monitoring	AR	Job plan details
		Oil Analysis should include: - Analyze the oil for wear particles, contaminants, water, and lubricity qualities
Functional Testing	N/A	- Check for signs of oil leakage.
		The rows below consist of the Failure Locations and Degradation Mechanisms for which this task is expected to be reasonably effective. It is left up to the user to assemble these lists into a useful craft instruction:
Oil Analysis	2Y	- Should address: Automatic Oilers for: Improper oil flow
		- Should address: Bearing Oil Slinger Ring for: Wear
Oil Filter Change, Clean, and Inspect	2Y	- Should address: Bearing Seals - Labyrinth for: Wear - Should address: Bearings - Antifriction Radial Thrust for: Wear - fatigue
		- Should address: Bearings - Altiniction Radia must for, wear - latigue
Operator Rounds	1D	- Should address: Breather Caps & Sight Glass Vents for: Clogged
		- Should address: Gaskets & O-Rings for: Leaks caused by deformation
Performance Trending	NR	- Should address: Gaskets & O-Rings for: Leaks caused by degraded material properties
		- Should address: Gaskets & O-Rings for: Leaks caused by erosion

PACML PACIFIC

Feature	Maximo 7.6.1	Maximo Application Suite (MAS)
Start Center	Portlets, static KPIs	Modern, interactive tiles & real-time KPIs
Navigation	Menu-driven	Role-based Work Centers, AI-powered search
Scheduling	Manual Gantt charts	AI-assisted scheduling & real-time updates
Work Orders	Multi-step updates	Streamlined UI, fewer clicks, AI integration
Assets	Hierarchical, static	IoT-enabled, real-time monitoring, Digital Twin
Locations	Form-based	GIS integration & geolocation
Users	Manual security groups	OpenShift IAM with SSO

### Maximo Application Suite (MAS) modernizes EAM:

- Cloud-first, AI-driven, and containerized for scalability.
- Simplified navigation improves efficiency.

### AI-powered scheduling & asset insights reduce downtime.

**OpenShift IAM integration** for easier, more secure user management.
