Condition Assessments

Inventory Management & Procurement

Safety & Incident Management

Space & Location Management

Self-Service

Flexible Configurations

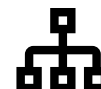

SOFTWARE DEVELOPMENT KIT / App Builder

Take complete control of your mobile development and configurations

NO-CODE DYNAMIC FORM BUILDER

Develop & deploy new forms in minutes with everything you need

WORKDAY WORKFLOW PLANNER

Choreograph and sequence how work gets done and when data is captured.

MULTIPLE PLATFORMS/ROLES

Android, iOS, MacOS, Windows. Single App – Multiple Roles

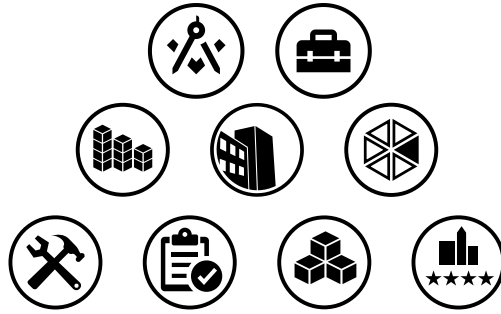

AUTOMATION , IoT and AI

Support for IoT Platforms, AI, BLE Beacons/Sensors, NFC, RFID, and Peripherals

3 Pillars of Enterprise Mobile to Support Data Quality

TRUE OFFLINE

SCALABILITY

RELIABLE SYNC

High quality, accurate and timely data produced using mobile apps are achieved with these 3 pillars:

TRUE OFFLINE

Access to **ALL** necessary data offline: all assets, all locations, all meters, all asset history... exceeding 1M records on the device . Enables users to create new assets, start inspections, submit requests or update work orders, locations and assets.

SCALABILITY & FLEXIBILITY

Grow with your data, user base and mobile needs over time without performance loss. Apps handle upwards of 30% data, user and feature growth per year without suffering **any** performance loss.

FAST & RELIABLE DATA SYNC

Keep **thousands** of records up-to-date and synced with your EAM in seconds. Never lose a drop of data – data never leaves the device until sync confirmation is received from EAM.
