Asset Maintenance Practices and Adoption of MAS

Leveraging Reliability Strategies will quickly enable you to do the right maintenance, at the right time, for the right reason to drive the highest levels of asset and financial performance .

MAS delivers an integrated solution that enables coverage of all types of maintenance practices.

The asset maintenance practices and MAS adoption journey depends on factors including criticality of the asset, operating context, , asset replacement cost and its impact of failure on safety, environment and operations.

Maintenance is an expense

Maintenance is an investment

Reliability Strategies

Optimize maintenance, asset performance, and asset lifespan with reliability centered maintenance.

Top RCM Pain Points:

Time and Resource Intensive
Significant time to complete requiring your best SME's, diverting them from core duties

Expensive
Due to resource and time requirements the process is inherently expensive

Difficult to Scale
Lack of digitization and integration make scaling implementation difficult

Solved By:

The Reliability Strategies Library (RSL)
Significantly reduce the time required to perform RCM and Failure Modes Effects Analysis (FMEA) by leveraging existing content

GenAI-Powered Strategy Builder
Augment RSL or customer created content quickly with a GenAI assistant

Deep workflow integration
Rapidly scale FMEAs and leverage strategy content across the Maximo Application Suite (MAS)

Benefits Realized:

Maximized uptime
Improved equipment reliability leads to reduced unplanned downtime.

Reduced cost
Eliminate unnecessary maintenance tasks and leverage condition monitoring where cost effective.

Extended asset lifespan
Identifying and addressing root causes of failures can significantly extend the operational life of equipment.

Enhanced safety
Prevent safety risks associated with equipment malfunctions

What to do in an emergency

Tire Pressure Monitoring System (TPMS)

The Tire Pressure Monitoring System (TPMS) detects the pressure of vehicle's tires and displays it on the LCD display.

1. Low tire pressure telltale / TPMS malfunction indicator
2. Low tire pressure position telltale (Shown on the LCD display)

Tire Pressure Indicator

- You can check the tire pressure in the assist mode on the cluster.
 - Refer to "Driving Assist mode" on page 4-53.
- Tire pressure is displayed 1~2 minutes later after driving.

Tire Pressure Monitoring System (TPMS)

- If tire pressure is not displayed when the vehicle is stopped, "Drive to display" message displays. After driving, check the tire pressure.
- You can change the tire pressure unit in the user settings mode on the cluster.
 - psi, kPa, bar (Refer to "User Settings mode" on page 4-54).

*** NOTICE**

- The tire pressure may change due to factors such as parking condition, driving style, and altitude above sea level.
- The tire pressure shown on the dashboard may differ from the tire pressure measured by tire pressure gauge.

Effective use of the TPMS

▲ WARNING

Over-inflation or under-inflation can reduce tire life, adversely affect vehicle handling, and lead to sudden tire failure that may cause loss of vehicle control resulting in an accident

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label.

(If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illumi-

What to do in an emergency

nates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly.

Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and

Tire Pressure Monitoring System (TPMS)

wheels allow the TPMS to continue to function properly.

*** NOTICE**

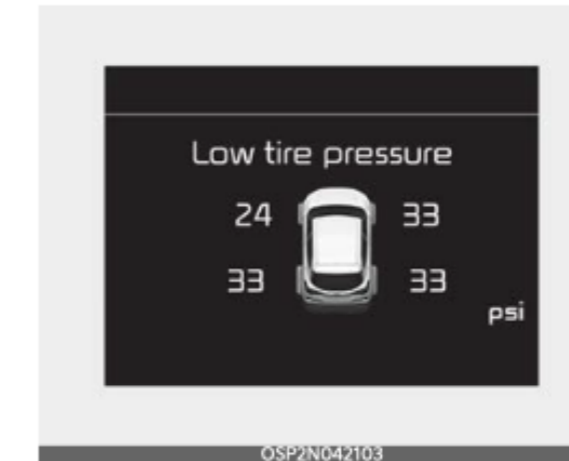

If any of the below happens, have the system checked by an authorized Kia dealer.

1. The low tire pressure telltale/TPMS malfunction indicator does not appear for 3 seconds when the ENGINE START/STOP button is turned to the ON position or engine is running.
2. The TPMS malfunction indicator remains illuminated after blinking for approximately 1 minute.
3. The Low tire pressure position telltale remains illuminated.

Low tire pressure telltale (⚠)

Low tire pressure position telltale

When the TPMS warning indicators are illuminated, one or more of your tires is significantly under-inflated.

If the telltale illuminates, immediately reduce your speed, avoid hard cornering and anticipate increased stopping distances. You should stop and check your tires as soon as possible.

Inflate the tires to the proper pressure as indicated on the vehicle's placard or tire

Tire Pressure Monitoring System (TPMS)

The Tire Pressure Monitoring System (TPMS) detects the pressure of vehicle's tires and displays it on the LCD display.

1. Low tire pressure telltale / TPMS malfunction indicator
 2. Low tire pressure position telltale (Shown on the LCD display)

Tire Pressure Indicator

- You can check the tire pressure in the assist mode on the cluster.
 - Refer to "Driving Assist mode" on page 4-53.
- Tire pressure is displayed 1~2 minutes later after driving.

Tire Pressure Monitoring System (TPMS)

- If tire pressure is low, the vehicle "play" message will appear on the LCD display. You can check the tire pressure in the user interface.
- You can check the tire pressure in the user interface.
 - psi, kPa
 - Settings menu

*** NOTICE**

- The tire pressure is affected by factors such as driving style, temperature, and driving conditions.
- The tire pressure gauge may not measure the tire pressure accurately.

Effective use

▲ WARNING

Over-inflation or under-inflation reduce tire life, affect handling, and may cause a tire failure that may result in a crash.

Each tire, including spare (if provided), should be inflated to the correct pressure when cold and at the correct pressure recommended on the manufacturer's tire inflation label. (If your vehicle is equipped with a tire size that is different from the placard on the vehicle, you should refer to the tire inflation label.)

As an added safety feature, the vehicle has been equipped with a tire pressure monitoring system.

Maintenance

Scheduled maintenance service

*** NOTICE**

After 10 years or 100,000 miles (150,000 km), we recommend to use severe maintenance schedule.

Scheduled maintenance service

Follow the Normal Maintenance Schedule if the vehicle is usually operated where none of the following conditions apply.

Follow the Maintenance Under Severe Usage Conditions if any of the following conditions apply.

- Repeated driving short distance of less than 5 miles (8 km) in normal temperature or less than 10 miles (16 km) in freezing temperature.
- Extensive engine idling or low speed driving for long distances.
- Driving on rough, dusty, muddy, unpaved, graveled or salt-spread roads.
- Driving in areas using salt or other corrosive materials or in very cold weather.
- Driving in heavy dust condition.
- Driving in heavy traffic area.
- Driving on uphill, downhill, or mountain road repeatedly.
- Using for towing or camping and driving with loading on the roof.
- Driving as a patrol car, taxi, other commercial use of vehicle towing.
- Frequently driving under high speed or rapid acceleration/deceleration.
- Frequently driving in stop-and-go condition.

If your vehicle is operated in any of the prior listed conditions, you should inspect, replace or refill more frequently, using the severe usage maintenance schedule instead of the normal usage maintenance schedule.

The next generation of AI-powered RCM

Creating custom strategies

- **Strategy Boundary**
Use AI to quickly write a description of your asset and define the boundaries of your strategy.
- **Failure Modes**
Leverage AI to build your component hierarchy, identify failure mechanisms and influences, speeding up the FMEA process.
- **Actions** NEW IN 9.2
Identify necessary tasks for failure modes detection and build task descriptions based on relevant failures with AI suggestions.
- **Mitigation Activities** NEW IN 9.2
Speed up development of Job Plan content based on relevant actions and failure modes with AI assistance.

Applying strategies

- **Suggested assets** NEW IN 9.2+
Deploy your strategies faster by using AI to identify related assets.

Reliability Strategies

What's coming in 9.2

Job Plan & PM support

View, manage, and create Job Plans, PMs, and Master PMs directly from mitigation activities within Reliability Strategies.

Implementation Dashboard

Check your assets' coverage, identify common failures, easily track your strategy implementation, create PMs to mitigate gaps.

Enhanced AI Strategy Builder

Generate actions and mitigation activities for your failure modes, ready to be turned into actionable PMs.

Advanced Strategies

Build your strategies faster with more information from the *Reliability Strategy Library*, improved user interfaces such as component and mechanism management, multiple PCR codes, and more.

Meter support

Link failure modes, actions, and mitigation activities to your Maximo Meters to better document PM intervals and to quickly identify root causes.

Risk Matrices

Classify your failure modes with against your defined standards with custom risk matrices.

Locations support

Apply your strategies to your locations in Maximo and track their implementation.

Strategy Import & Export

Import your existing reliability content or edit strategies in your preferred tool with pre-formatted data templates.

Strategy Validation

Identify common errors in your strategies, such as unlinked failure modes, missing action effectiveness, and more.

Job Plan and Preventive Maintenance Support

Quickly deploy your strategy to your assets from Reliability Strategies.

Create job plans, PMs, Master PMs, and link your existing data to your strategies for tracking.

The screenshot displays the IBM Maximo Application Suite interface for 'Reliability Strategies'. The main heading is 'Create mitigation activity'. Below this, there is a 'Labor hours' input field with the value '6'. The 'Actions' section contains a table with columns: Name, Type, Occurs, Frequency, Frequency value, Labor hours, and Failure modes. Below the actions table is a 'Job plans' section with a search bar and a table with columns: Job plan, Description, Status, Revision, PM, Master PM, and State. A tooltip points to the 'State' column with the text 'The completion status of this job plan'. At the bottom, there are 'Create' and 'Close' buttons.

Actions Table:

Name	Type	Occurs	Frequency	Frequency value	Labor hours	Failure modes
Check coolant	Training	Recurring	Interval	2 days	8	11
Check filter	Preventive Maintenance	Recurring	Interval	4 days	24	12
Drain water	Training	Recurring	Interval	1 month	4	4
Inspection	Training	Recurring	Interval	3 hours	12	5
Alignment check	Preventive Maintenance	Recurring	Interval	3 months	6	2

Job plans Table:

Job plan	Description	Status	Revision	PM	Master PM	State
APPLREQ-1	Application Request-1	Active	1	12	7	Unknown
INS-PC	PC Inspection	Inactive	1	22	10	Unknown
ENGSERV	Engine service	Draft	0	9	10	Unknown

Job Plan and Preventive Maintenance Support

Quickly deploy your strategy to your assets from Reliability Strategies.

Custom strategies / Axially Split Case - Mechanical Seal - Kingsbury-Sleeve Bearings-Oil Lubed / Mitigation activities /

Create mitigation activity

Mitigation details

*Mitigation activity: Oil analysis | Description: Monitor contamination

Description: [Generate description](#)

Involves sampling and testing lubricating oil to detect contamination, degradation and wear particles.

AI explained

Recommendation

A mitigation activity description has been generated using the details you entered along with examples from similar strategies in the reliability library. The draft reflects common intent, context, and steps for this type of activity. Review and refine it so the description accurately represents the work required for your asset and operating environment.

How it works

- Retrieve.** The model retrieves information from the action name, action type, and related examples from the strategies library.
- Analyze.** The model analyzes common patterns and task details associated with similar actions.
- Recommend.** The model presents a draft action description in context.
